

Environmental Policy

Meggitt Airframe & Engine Systems specialise in the design, manufacture, and post-design services (PDS) of airborne, marine electric, electromechanical, ignition and gaseous equipment; commercial and military.

The design, development, manufacture and repair of electro-mechanical and electronic accessories for aero and industrial engines, including fighting vehicles.

As company we recognise the responsibility we have towards our environment and we are committed to the following principles. We will aim to;

Comply with environmental legislation relevant to our environmental aspects and meet environmental parameters contained within contractual agreements and within other requirements to which we subscribe.

Prevent pollution and continually improve to minimise the environmental impact of our operations by

- Implementing best practice
- Reducing wherever possible the use and emission of harmful resources
- Continuing to reduce waste through minimisation and recycling programmes and to manage waste disposal in a responsible manner
- Integrating environmental considerations into the design of all new products and processes
- Using energy, raw materials and natural resources efficiently
- Undertaking audits and implementing improvement programmes
- Protect the environment and minimise pollution from our activities

Work with our suppliers to minimise the impact of their products and operations on the environment.

Raise employee awareness so that we can carry out our environmental responsibilities effectively.

The Environmental Management Representative retains accountability to the Board for environmental issues, with the day to day management being the responsibility of our head of programs.
